What is in it for you?

This MOOC aimed at knowing the origin and extraction, treatment and processing of aggregates, which are **the second most used resource after water**. The objective of this course is to acquire fundamental knowledge about aggregates, their origin, their exploitation, the most important applications in daily life and in industry recycling, sustainability and interaction with the environment, social dimension and digitalization processes that are being applied and developed in this industry. It is structured in 9 modules in which the basic concepts are explained.
